

Why is a problem of the deviation of months and days?

- **Jewish calendar** has the deviation between Adar I and Adar II. 5779 (19.02.2019 and 21.03.2019).
- **The Gregorian calendar** has the deviation of February 2018, since the full moon is missing in February 2018, but two full moons in **January I and II** (2. January 2018 and 31. January 2018) and **March I and II** (02.03 .2018 and 31.03.2018)

Astrology has failed!

Chronology - Astronomical era

In the g-d's calendar the deviation is 0, each full moon is always a month, 30 - / + days and in 360 - / + days, as in the Bible about the creation of 7 days (week) and the determination of times and days and years.

Astrology, on the other hand, counts 364 days a year for the moon and the sun. The only thing that mitigates this supposed - but for every subject - practicable - "confused" is the passing weekdays. Therefore, for centuries, all attempts to reduce the year to exactly 52 weeks (364 days with 1-2 "weekless" closing days), or even a 10-day week, were doomed to failure, according to the astronomical chronology.

Why are Adar I and II distributed in 13 months in 5779? And why is the full moon missing in February 2018? It will be too long to substantiate in details. 364 days per year? $4 \text{ days} \times 24 \text{ hours} \times 60 \text{ minutes} / 360 \text{ days} = 16 \text{ minutes / day}$ Time shift! Where does the deviation from 16 minutes / day come from? I believe the time shift is not from G-d, but from astrology. Both the Jewish calendar and the Gregorian calendar show the time shift according to the Mondcalendar, so it is denied. I'm right? All biblical times lie in the hand of G-d alone. He can slow down or speed up time, but He does not, because time is the order of G-d. The times after the moon and sun have to be adjusted again and again, according to the astronomical chronology. The time of the moon and the sun is reglamated, our time is not your time. I believe the Astrology has failed, but the astronomical chronology helps to adjust the times according to the G-d's moon calendar. We can calculate the noah time and the Jesu' birth time according to the God's moon calendar, why astrology failed.

Determination of times and days and years

And God said, Let there be lights in the expanse of the heavens to separate the day from the night, and let them be signs and tokens [of God's provident care], and [to mark] seasons, days, and years, so in [Genesis 1:14](#).

In the Bible, there are no seconds and minutes to read. But we find good hours and months, but where do the 24 hours a day come from? I do not know how the hours and minutes are divided into one day. Where does the time of seconds come from? I guess there is a problem of time shifting. The G-d's calendar is more accurate by the determination of times, days, and years! All times are alone in the hands of G-d!
